DVC Data Versioning Evidence

MLOps GBFS Bike-Sharing | 20 October 2026 | branch feat/gbfs-data-ingestion

Version transition

Baseline	359df27 - Track baseline processed data with DVC
New version	4b1f91f - Add new GBFS data version
Raw data	Two new timestamped GBFS JSON feeds; raw directory changed from 5 to 7 files (including .gitkeep).
Processed table	4,948 to 7,431 lines (+2,483; line counts include the CSV header).

DVC diff evidence

Captured DVC command output

```
$ dvc diff 359df27 4b1f91f --show-hash
Added:
    375604db  data/raw/station_information_20261020T045622383652Z.json
    d87317d5  data/raw/station_status_20261020T045622383652Z.json

Modified:
    b6d7a14c..5f1ea0f2  data/processed/
    447cc93d..33a37a6f  data/processed/station_features.csv
    880e8ce9..4c92e105  data/raw/

files summary: 2 added, 1 modified
```

Captured terminal output from `dvc diff 359df27 4b1f91f --show-hash`. DVC reports two added raw snapshots and modified directory/file hashes.

Validation

dvc status: Data and pipelines are up to date. The diff records file and hash changes; the row-count comparison above verifies table growth. DVC remote storage is not configured, so dataset contents remain in the local DVC cache until a remote is added and `dvc push` is run.
